manufacturer's defects for stainless steel and  
copper Chimney Tops*

Stainless Steel Top-Mounted Multi-Flue Top

Copper Top-Mounted Multi-Flue Top

Stainless Steel Single-Flue Top

## All Chimneys Need a Top!

### Here's Why:

#### ELIMINATE MOISTURE DAMAGE

Moisture entering your chimney erodes masonry and mortar joints and will cause damper and firebox rust that leads to expensive repairs. The Chimney Top protects your flue from moisture damage.

#### PREVENT BIRD AND ANIMAL INVASION

The Chimney Top protects your chimney from nesting birds, squirrels, raccoons, and other disease-carrying animals.

#### PROTECT AGAINST AIRBORNE EMBERS AND SPARKS

The Chimney Top's 18-gauge mesh reduces the risk of fires caused by airborne embers and sparks escaping from your chimney flue.

#### GUARD AGAINST FLUE BLOCKAGE

Leaves and debris entering a chimney may cause a flue blockage. This can lead to fire, smoke damage, and even carbon monoxide poisoning. The Chimney Top guards against these dangers.

Ask your chimney professional to recommend and install a Chimney Top for you.
