

The Guaranteed Solution to Smoking Fireplaces

Mechanical Venting of Fireplaces

Smoke Free

Quiet

Clean

ENERVEX™
VENTING DESIGN SOLUTIONS

Optimize your fireplace and create the perfect draft

The perfect fireplace fire features a flame that's just the right size – not too high or too low and that doesn't allow smoke to escape from the firebox.

Today's energy efficient homes are designed to keep airflow in the house to a minimum, which saves energy but makes it difficult to create a good draft. A fireplace that doesn't get a good draft spills smoke, soot, and ash into the house, creating a mess and an unpleasant environment.

Regardless of the airflow in your house, the RS Chimney Fan provides a reliable draft in your chimney – all the time. And you'll never even notice that it's there.

Whether your fireplace is old or new, the RS Chimney Fan is right for you

Solid Fuel

Use the RS Chimney Fan for solid fuel fireplaces – and turn the fan on to ignite new wood and to keep ashes from escaping into the house.

Gas

ENERVEX offers great controls and safety features for gas-fired fireplaces, which make operating your fireplace easy and problem-free.

Stoves

Even in homes where airflow is limited, it's easy to achieve the perfect draft with the RS Chimney Fan.

BBQ/Pizza Ovens

The RS Chimney Fans can withstand the high temperatures and dirty environment of BBQs, pizza ovens, and more.

RS Chimney Fan – The Guaranteed Solution

The RS Chimney Fan is mounted on top of the chimney, creating the perfect draft in the flue. With ENERVEX's extremely quiet and reliable chimney fan system, you no longer have to worry about draft problems or a smoking fireplace.

Quiet

With the RS Chimney Fan's whisper-quiet operation, you won't be distracted by a whirring motor or noisy blades. Instead, all you'll hear is the soothing crackle of the fireplace.

Aesthetically pleasing

After you install the RS Chimney Fan, you'll be the only one who knows it's there. The fan's compact design makes it less noticeable than most chimney caps. It can also be recessed or hidden under a blue-stone or chimney enclosure.

No fireplace modifications

When you use the RS Chimney Fan you won't have to change the design of your fireplace, modify the fireplace opening or make any major renovations to the walls or the chimney.

Energy Efficient

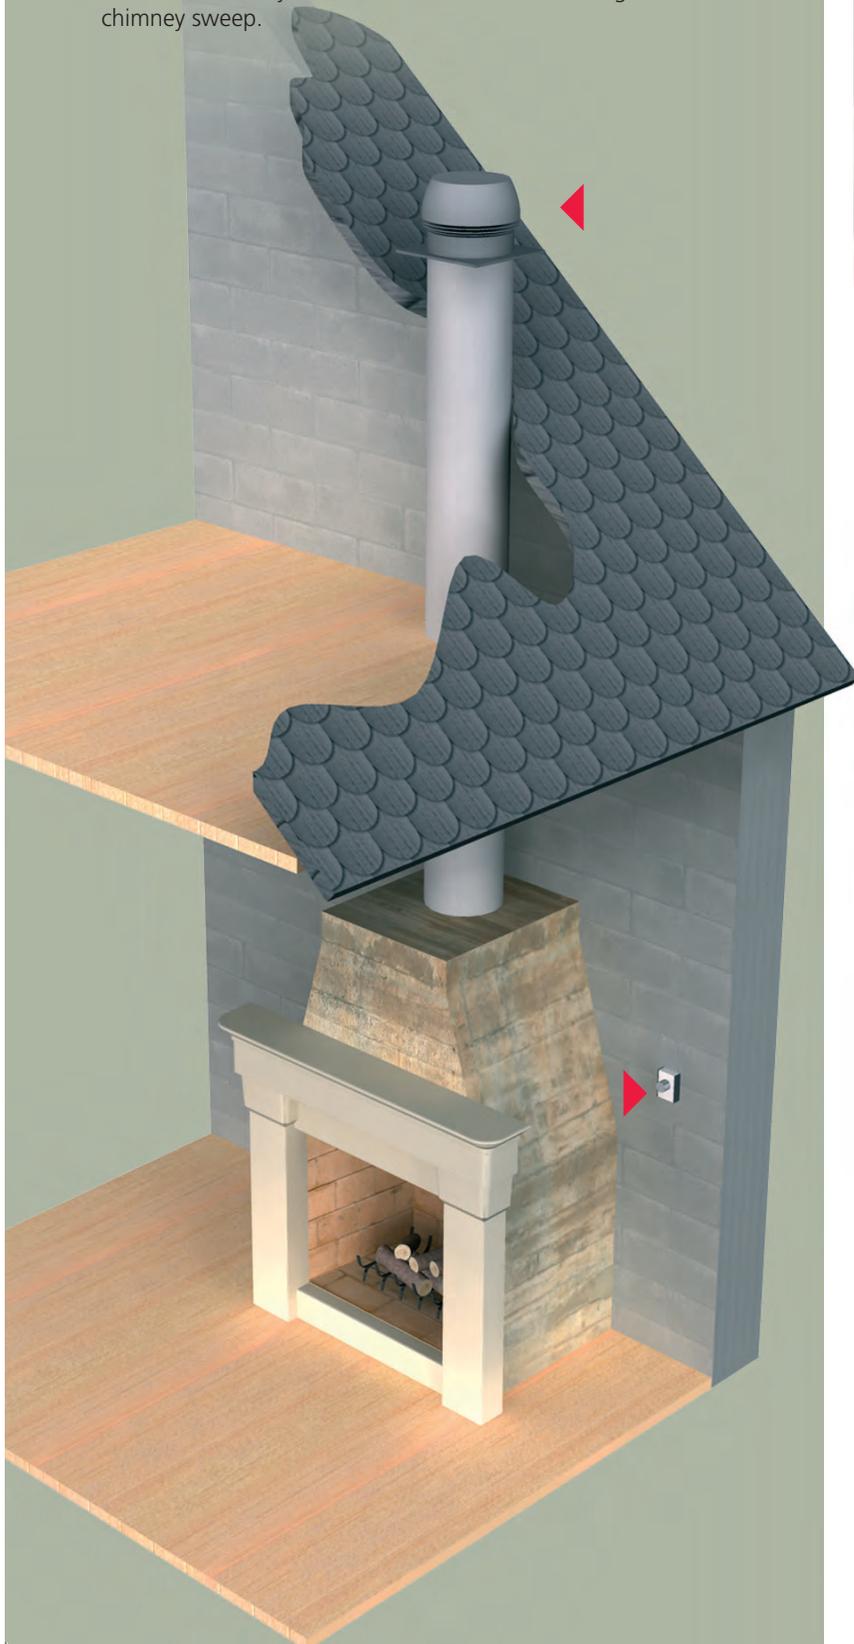

Because the energy efficient RS Chimney Fan consumes a minimal amount of energy – about as much as a standard light bulb – you don't have to worry about high energy bills or an overloaded circuit breaker.

Easy Installation Optimal Performance

The RS Chimney Fan is mounted on top of the chimney, leaving little to no mess during installation.

The fan comes with a fan speed control. You should mount the fan speed control in the room with the fireplace so you can adjust the speed (and draft) from there.

The motor requires no maintenance, but the fan should be cleaned when the chimney is cleaned. We recommend using a CSIA certified chimney sweep.

Installing the fan on top of the chimney is fast and easy.

ENERVEX offers a variety of controls for easy operation. Ask your dealer which works best for your fireplace

The products

FSC variable Fan Speed Control comes standard with the fan.

RS Chimney Fan

Made of high quality, recycled cast aluminum, RS Chimney Fans keep the perfect draft for a long time. The fan features a quiet, enclosed pre-lubricated motor and can be used with wood, gas, oil, or pellet fuel and serves stoves, ovens, furnaces, water heaters, BBQs, and pizza ovens.

EcoDamper System

The low profile Mechanical Fireplace Damper (MFD) is an accessory to be used in conjunction with an ADC100 control and RS model chimney fan as part of the EcoDamper System. This damper prevents excess heat from escaping through the chimney when the fireplace is not in use and eliminates the need for glass doors.

ADC100 Control

The ADC100 Control, for gas fireplaces, features a draft switch that shuts the appliance off when there is not enough draft, protecting your family from dangerous flue-gasses.

EW40 Control

The EW40 Control features wireless installation of the control and automatic on/off of the fan. It alerts when it is time to add wood to the fire and alerts when the flue temperature gets too high, indicating a potential flue fire.

PDS1 Proven Draft Switch

Use the PDS1 Proven Draft Switch to provide protection from insufficient draft. When there is an unsafe draft, the switch shuts down the gas-fired appliance or fireplace.

Recommended by the Pros

The nation's best dealers have been recommending and installing the RS Chimney Fans for several decades, and they and their customers have a lot of good things to say.

"I've been in the hearth industry a long time, so I know a lot about poorly-performing chimneys. The RS Chimney Fan is the best way I know to prevent soot and smoke from coming into a house. I tell my customers that if they want a maintenance-free, problem-free way to stop smoking fireplaces – and save on fuel costs – they need to install an RS Chimney Fan."

Well tested in the market....

A unique fireplace in a new home could not be designed to work with natural draft, so the RS Chimney Fan was added to ensure lifelong safe ventilation of the beautiful fireplace.

Smoke entering the living room in this home in Atlanta, GA, kept the family from using their wood-fired fireplace for years. After installing the RS Chimney Fan on the chimney, they now frequently gather in front of a clean and safe fire. The fan is barely noticeable.

Built more than 200 years ago, the flues in the White House in Washington, DC, were in poor shape and had to be relined. Today, with the help of RS Chimney Fans, the White House fireplaces are vented properly and safely.

Act now! Experience the RS Chimney Fan!

Now you can have the fireplace of your dream, venting problem-free for many, many years to come. Contact us now for assistance on what size fan and which control to use, where to buy – and learn more about our incredible warranties.
